- Command Mode
- Canceling the Command
- Saving the Settings

1.1 Switch Port Number

Switch physical port number are formatted as <type><slot>/<port>, types and names of which are listed in the following comparison table:

Interface type	Name	Simplified name
10M Ethernet	Ethernet	e
100M fast Ethernet	FastEthernet	f
1000M Ethernet	GigaEthernet	g

The expansion slot number in standard configuration is always 0. The others begin at 1 and continue from left to right.

Ports number in the same expansion slot is numbered from bottom to top and from left to right, starting with 1. If only one port exists, it is numbered 1.

Note:

Ports in modules are numbered orderly from bottom to top and from left to right.

1.2 Before Starting up Switch

Before configuring after turning on the switch, please confirm the following steps:

- (1) Setup Switch Hardware following the manual.
- (2) Configure the PC Terminal Emulation procedure.
- (3) Making a IP address planning first as per IP network protocol.

1.3 Help

By a question mark (?) or direction keys, you can obtain the associated information for any command:

- The currently available command list can be presented if you enter a question mark.
Switch> ?
- The currently available commands starting with the known characters in the list can be displayed if you enter the known characters and then a question mark (without space).
Switch> s?
- The parameter list of a command will be obtained if you enter the command, press "Space" and enter the question mark.
Switch# show ?
- The previously entered commands can be presented if you press the "up" arrow key. If you continue press the "up" arrow key, more commands can be shown. If you press the "up" arrow key and then the "down" arrow key, the next command line following the current one can be presented.

1.4 Command Mode

The window for the switch's command line can be in multiple modes: Each command mode allows you to set a different suite on a switch, while the presently available commands are up to your current command mode. Input a question mark to list all commands available for current command mode The following table shows frequent command modes:

Command Mode	Access mode	Window prompt	Logout mode
System Supervision Mode	Type "Ctrl-p" after power on	monitor#	None
User mode	Login	Switch>	Run the "exit" or "quit" command.
EXEC mode	Enter the "enter" or "enable" command in user mode.	Switch#	Run the "exit" or "quit" command.
Global Configuration mode	Enter the "config" command in EXEC mode.	Switch_config#	Run the exit or quit command or just press the "Ctrl-z" composite key to return the EXEC mode.
Port configuration mode	Type the interface command in global Configuration Mode, e.g. interface g0/1	Switch_config_g0/1#	Run the exit or quit command or just press the "Ctrl-z" composite key to return the EXEC mode.

Each command mode will certainly limit you to use a certain command subset. If you have trouble in inputting a command, check the interface prompt and input the question mark (?)

for a list of available commands. You might be in the wrong command mode or using incorrect syntax.

In the following example, please pay attention to the change of the window prompt and its new command mode:

```
Switch> enter
Password: <enter password>
Switch# config
Switch_config# interface g0/1
Switch_config_g0/1# quit
Switch_config# quit
Switch#
```

1.5 Canceling the Command

If you want to cancel a command or resume the default attributes, usually add the “no” keyword before most commands.

For example, no ip address.

1.6 Saving the Settings

You may need to save the configuration changes, so that you can recover the original configuration in case of system restarted or power cuts. You can use write command to save configuration in the Administration Mode or Global Configuration Mode.
