## Chapter 47 DLF-Control

### 47.1 DLF-Control Overview

Unknown packets are classified into unknown unicast packets and unknown multicast packets.

Unknown unicast packets are packets that cannot find the destination MAC addresses in the MAC table.

Unknown multicast packets are packets that cannot find the destination MAC addresses of the multicast packets in the multicast MAC table.

### 47.2 Configure DLF-Control

#### 47.2.1 DLF-Control Configuration List

Configuration Task	Description	Detailed Configuration
Configure DLF-forward unicast	Required	47.2.2
Configure DLF-forward unicast	Optional	47.2.3
Displays and Maintain DLF-forward Configurations	Optional	47.2.4

#### 47.2.2 Configure DLF-forward unicast

Operation	Command	Remarks
Enter the global configuration mode	<b>system-view</b>	
Enter interface configuration mode	<b>interface ethernet <i>interface-num</i></b>	
Enable dlf-forward unicast	<b>dlf-forward unicast</b>	Enabled by default.

Disable dlf-forward unicast	<b>undo dlf-forward unicast</b>	
-----------------------------	---------------------------------	--

### 47.2.3 Configure DLF-forward multicast

Operation	Command	Remarks
Enter the global configuration mode	<b>system-view</b>	
Enable dlf-forward multicast	<b>dlf-forward multicast</b>	Enabled by default.
Disable dlf-forward multicast	<b>undo dlf-forward multicast</b>	

### 47.2.4 Displays and Maintain DLF-forward Configurations

Operation	Command	Remarks
Displays the unicast dlf-forward control	<b>display dlf-forward interface [ ethernet <i>interface-num</i> ]</b>	
Displays the multicast dlf-forward control	<b>display dlf-forward global</b>
